How to Read This Document

Each user story's acceptance criteria (ACs) are reviewed against two criteria:

- Ambiguous — the AC can be interpreted in more than one way, leaving room for misaligned implementation
- Untestable — the AC cannot be verified with a specific, repeatable test (no measurable expected result)

Each flagged item includes a Recommendation for the Dev and KM Analyst to resolve before Sprint 2 testing begins.

US-01 — Record Student Violation

AC #	AC Text	Flag	Issue	Recommendation
1	Allow selection of student by ID, name, or search	AMBIGUOUS	"Search" is vague. Partial name match? Live search or button-triggered?	Define search as text input querying by exact or partial name/ID. Specify min. chars (e.g. 3) before search triggers.
2	Officer can select violation type from a predefined list	CLEAR	—	—
3	Must capture date, time, location, and detailed description	AMBIGUOUS	"Location" is undefined — dropdown or free text? "Detailed description" has no minimum length.	Define location as a dropdown (e.g. Classroom, Hallway) with an optional 'Other' free-text field. Specify if description has a minimum character count.
4	Auto-assign severity OR allow manual override	AMBIGUOUS	What triggers auto-assignment? Who has override permission?	Auto-severity derives from violation type default (US-05). Define override permission as role-based.
5	Student violation history must be updated real-time	AMBIGUOUS / UNTESTABLE	"Real-time" not defined. Within 1 second? On page refresh?	Replace with: "The violation must appear in history immediately upon successful save, without requiring a manual page refresh."

Overall US-01 Risk: MEDIUM-HIGH — ACs 1, 3, 4, 5 need clarification before test cases can be finalized.

US-02 — View Student Violation History

AC #	AC Text	Flag	Issue	Recommendation
1	Search students, display violations in chronological order	AMBIGUOUS	Ascending or descending? Most recent first not specified.	Specify: default sort is most recent first (descending). Allow toggle.
2	Show: type, date, description, severity, status, officer	CLEAR	—	—
3	Filter by date range, violation type, or severity	AMBIGUOUS	Can filters be combined (AND logic) or only one at a time?	Clarify: filters are combinable. Date range + severity returns violations matching both.
4	Display summary of violations	AMBIGUOUS / UNTESTABLE	"Summary" is undefined — count? Breakdown? Text?	Define: total count, count by severity (Minor/Major/Severe), count by status (Open/Resolved).
5	Click any violation to see full details and evidence	AMBIGUOUS	"Evidence" not mentioned in US-01. Where/when is it attached?	Add evidence upload field to US-01 AC-3. Specify supported file types and size limits.

Overall US-02 Risk: MEDIUM — ACs 1, 3, 4, 5 need clarification. AC-5 is a dependency gap with US-01.

US-03 — Generate Violation Reports

AC #	AC Text	Flag	Issue	Recommendation
1	Generate by student, by section/class, or by date range	AMBIGUOUS	Can these be combined? e.g. Section 10-A between Jan–Mar?	Allow combined filters. Date range must be combinable with student or section filter.
2	Include summary statistics (total, by type, by severity)	CLEAR	—	—
3	Option to export as PDF or Excel	AMBIGUOUS	No spec on what the exported file must contain.	Specify: export contains all visible data incl. charts. Define filename format e.g. "violation-report-[date].pdf".
4	Visual charts showing violation trends	AMBIGUOUS / UNTESTABLE	What chart type? What data? What is the	Specify: (1) monthly count bar chart, (2) violation type

			minimum meaningful chart?	breakdown pie chart. Define data source for each.
5	Filter by resolved vs. unresolved violations	CLEAR	—	—

Overall US-03 Risk: LOW-MEDIUM — ACs 1, 3, 4 need definition before the reporting module is built.

US-04 — Assign Sanctions / Penalties

AC #	AC Text	Flag	Issue	Recommendation
1	Search and select a recorded violation from student's history	CLEAR	—	—
2	Display predefined sanctions based on violation severity	AMBIGUOUS	What if no sanctions are linked to a severity? Empty list? Error?	Fallback: display all sanctions with a note "No default sanctions defined for this severity."
3b	Add custom sanctions if needed	AMBIGUOUS	Who can add? Are custom sanctions saved to the library?	Custom sanctions are single-use and NOT saved to library unless added by Admin via US-05.
3c	Set start and end date for time-bound penalties	AMBIGUOUS	Required for all or only certain types? What if end < start?	Dates optional, shown only for time-bound types. Validate: end date must be >= start date.
4	Status auto-updates to 'Sanction Assigned'	CLEAR	—	—
5	Record officer who assigned and date/time	CLEAR	—	—
6	Notify the student about the assigned sanction	AMBIGUOUS / UNTESTABLE	Notify through what channel? What is the notification content?	Define: in-app alert when student/parent logs in. Minimum content: student name, violation type, sanction, start/end date.
7	Prevent assigning sanctions to resolved violations	CLEAR	—	—

Overall US-04 Risk: MEDIUM — ACs 2, 3b, 3c, 6 need resolution. AC-6 may require a notification system not currently scoped.

US-05 — Manage Violation Types & Sanctions Library

AC #	AC Text	Flag	Issue	Recommendation
1	Add, edit, delete violation types	CLEAR	—	—
2	Each type: Name, Description, Default Severity, Category	AMBIGUOUS	"Category" is undefined — free text or predefined list?	Define Category as a predefined dropdown (e.g. Attendance, Behavior, Academic Dishonesty). Admins can add/edit categories.
3	Add, edit, delete sanctions	CLEAR	—	—
4	Each sanction: Name, Description, Duration, Recommended For	AMBIGUOUS	"Duration" — number, range, or free text? "Recommended For" — link or tag?	Duration: numeric field (number of days, optional). Recommended For: multi-select tied to severity levels.
5	Link sanctions to specific violation types	CLEAR	—	—
6	Prevent deletion of types/sanctions in active use	CLEAR	—	—
7	Simple and organized interface for all types and sanctions	UNTESTABLE	"Simple and organized" is subjective and unmeasurable.	Replace with: all violation types in a sortable, paginated table. Sanctions filterable by Recommended For severity.

Overall US-05 Risk: LOW — Foundation story with mostly clear ACs. ACs 2, 4, 7 need minor clarification.

US-06 — Student Violation Appeal Process

AC #	AC Text	Flag	Issue	Recommendation
1	Students/parents can view their own violation records	AMBIGUOUS	How do students/parents log in? No user story defines authentication or role-based access.	MISSING DEPENDENCY: A separate user story for student/parent authentication must be scoped. Flag this to PM immediately.
2	Provide a button/option to submit an appeal	CLEAR	—	—
3	Appeal form: Reason, Explanation, Evidence upload, Preferred resolution	AMBIGUOUS	"Preferred resolution" — free text or predefined? File upload limits?	Preferred Resolution: dropdown (Dismiss, Reduce Severity, Change Sanction, Other). Upload: max 5 files, PDF/JPG/PNG, max 5MB each.

4	Appeal automatically routed to assigned officer/admin	AMBIGUOUS	"Automatically routed" — how? What if officer is no longer assigned?	Routing = in-app notification to assigned officer. Fallback: route to any available Administrator.
5	Track appeal status: Pending, Under Review, Approved, Rejected	AMBIGUOUS	Who changes status? What triggers each transition? Are students notified?	Define transitions: Pending (auto) → Under Review (officer sets) → Approved/Rejected (officer decision). Notify student/parent on every status change.

Overall US-06 Risk: HIGH — AC-1 reveals a missing user story (student/parent authentication). Must be resolved before US-06 can be built or tested.

Summary of Flags

User Story	Ambiguous ACs	Untestable ACs	Overall Risk
US-01 Record Violation	1, 3, 4, 5	5	MEDIUM-HIGH
US-02 View History	1, 3, 4, 5	4	MEDIUM
US-03 Generate Reports	1, 3, 4	4	LOW-MEDIUM
US-04 Assign Sanctions	2, 3b, 3c, 6	6	MEDIUM
US-05 Manage Library	2, 4, 7	7	LOW
US-06 Appeal Process	1, 3, 4, 5	—	HIGH

Top 3 Issues to Resolve Before Sprint 2 Testing

1. Missing user story: Student/Parent Authentication

US-06 AC-1 assumes students and parents can log in, but there is no user story defining authentication, roles, or access levels. The team must scope this or explicitly mark it out of scope.

2. Evidence is referenced in US-02 but never defined in US-01

If evidence can be attached to a violation, it must be added to US-01's recording ACs. Otherwise, US-02 AC-5 is testing a feature that was never built.

3. Notification mechanism is undefined across multiple user stories

US-04 AC-6 and US-06 AC-4/5 all assume a notification system exists. No user story defines it. Must be scoped or explicitly marked out of scope before development begins.
